Zaporizhzhya nuclear power plant

FIVE CONCRETE PRINCIPLES FOR PROTECTING THE ZNPP

1

There should be no attack of any kind from or against the plant, in particular targeting the reactors, spent fuel storage, other critical infrastructure, or personnel;

2

The Zaporizhzhya NPP should not be used as storage or a base for heavy weapons (i.e. multiple rocket launchers, artillery systems and munitions, and tanks) or military personnel that could be used for an attack from the plant;

3

Off-site power to the plant should not be put at risk. To that effect, all efforts should be made to ensure that off-site power remains available and secure at all times;

4

All structures, systems and components essential to the safe and secure operation of the Zaporizhzhya NPP should be protected from attacks or acts of sabotage; and

5

No action should be taken that undermines these principles.
